About SpaceDreamS

Founded in 2021 and based in Paris and Toulouse, SpaceDreamS is a spaceport architect. The company's mission is to enhance the competitiveness of launch systems by developing interoperable and modular launch pads. SpaceDreamS provides turnkey ground solutions for launch vehicles and spaceports, aiming to reduce the cost and time to access space.

A multiple laureate of the France 2030 program, SpaceDreamS is supported by the DGA, CNES, and ESA to foster the growth of its clients in France and Europe.

We are developing NuPad (Next-generation Universal Pad), the first interoperable launch platform adaptable to any type of launch vehicle, at various lifecycle stages, and capable of being transported between certified launch sites.

The TwinPad is the digital twin of the ground launch system. It facilitates the development of launcher and launch pad operations software, as well as virtual and real-time simulation of cryogenic, electrical, and mechanical fluid processes.

SpaceDreamS is also conducting preliminary studies on the development of ground support systems for several mini and micro launchers.

Role

The Project Manager is responsible for the end-to-end management of projects, from bid preparation to project closure. The Project Manager may be involved with multiple projects of varying sizes.

They coordinate the team, manage resources, control costs and timelines, and ensure customer satisfaction while respecting contractual obligations and quality standards. The Project Manager ensures each project is running smoothly in the short-medium term and pre-emptively addresses long-term project and resourcing needs.

The projects to be managed (in bid and delivery phase) are a mixture of engineering studies and hardware delivery.

Main Responsibilities:

Bid Management: Contributing to the analysis of client specifications and preparing bids in collaboration with technical and commercial teams.

Project Management: Organising internal and external meetings, leading the team, managing schedules, risks, and ensuring quality, cost, and time objectives are met. Overseeing subcontractor activities in collaboration with the technical teams.

Reporting and Forecasting: Providing regular reporting, consolidating budget forecasts, and communicating key elements for the company's strategic objectives.

Profile

We are looking for a candidate with at least 3 years of demonstrated project management experience. The ideal candidate will have some experience in all of bid management, project management, and reporting and forecasting.

You have experience in complex industrial environments covering multiple domains (mechanical, fluidic, and control & command systems), or a strong technical background.

You are comfortable managing projects and clients. You can assert your positions with clients while maintaining constructive relationships.

You are capable of structuring and forecasting new projects just as much as you can drive existing projects.

Your approach is rigorous and organised. You can easily prioritise parallel activities.

You can clearly identify and manage project risks and mitigation methods.

You are proficient in the Microsoft Office suite, including MS Project.

Fluent English is required.

We offer

The opportunity to be part of a unique human and technical adventure within a diverse and experienced team.

Freedom of action and organisation in your projects with appropriate resources.

A salary that matches your skills and the key role you will take on. Additional social benefits.

A simple, efficient, and advantageous health insurance. The possibility to work partially from home.
